Concepts For Nursing Practice (with Pageburst Digital Book Access On VST), 1e

Synopsis

Concepts for Nursing Practice is a groundbreaking new title by Jean Giddens, a leading expert on conceptual teaching and learning in nursing education. Offered as digital book plus print copy package, Concepts for Nursing Practice uses a simplified, intuitive approach to connect concepts across the entire nursing curriculum, making this an ideal companion for Elsevier nursing textbooks. Fifty-three of the most important concepts, written by leading subject matter experts, are organized into three units. Unit One covers patient profile concepts, which are the concepts that lay the foundation for a patient-centered approach to nursing. Unit Two, the core of the content, emphasizes biophysical and psychosocial concepts that relate to individuals seeking health care. The focus of these concepts is on the health-and-illness continuum across the lifespan. Unit Three covers concepts related to professionalism and the whole of the healthcare system related to the delivery of health care, professional aspects of nursing, and health policy. This unit also covers the QSEN competencies. Original full-color illustrations and model cases depict the principles of each concept and show how concepts are related. A list of exemplars in each concept chapter convey the most common health conditions or situations pertaining to the concept.

A GREAT book that has long-term implications for the nursing profession. Complements the medical model, but is uniquely nurse oriented. Spans the depth and breadth of nursing practice. Chapter authors are all true experts. BRAVO.

This book was required for my program. I thought the book was very condensed but a easy read. The book is very rich in content. Some of the info in the book is not correct for example the author incorrectly groups psych drugs. That is why I'm giving this book 4 stars.

This is just a really cool book! I am a graduate student in an MSN program with a focus in nursing education. This book is broken down into individual concepts and is very nicely organized. Although I'm not teaching yet, I'm planning to buy my own copy (I rented this one for school) to have as a reference. Giddens knows what she's talking about!

I have heard Jean Giddons speak twice regarding concept based curriculum and the book is terrific. I would recommend it to anyone thinking about implementing concept-based curricula.

I love the Book. I did not order the eBook.Thanks,Sharon

I only love this book b/c it is required for school and was EXACTLY what I needed without having to sell a kidney to pay for it! lol! The book was in GREAT shape, brand new.

Of all my nursing books this is the only book that came with the Pageburst digital book access. I learn better reading a real book but it is killing me to carry these giant 3" thick books to class for reference and daily class activities. It would cost several hundred dollars to buy access codes for them. I wish us book readers could pay just a little extra for the code, if it's not included.

Excellent book. We will be using it in our PN program
