Cabling: The Complete Guide To Copper And Fiber-Optic Networking

Synopsis

Two books in one! Complete coverage of data cabling and fiber optics makes this the most comprehensive cabling book on the market. With the growing demand for fiber optics in large-scale communications networks, network professionals need complete, up-to-the-minute information. The fourth edition of this popular guide provides you with the latest on copper and fiber-optic networking. It is particularly useful for those studying for the Fiber Optics Installer or Fiber Optics Technician certifications. Part I covers the basics of cabling, while Part II is devoted to in-depth information on fiber optics, allowing you to stay up to speed on all aspects of the field. Demonstrates how to work with all of the various types of cables—from those used to network desktops to hubs and switches up to those used by major telecommunications carriers. Appeals to anyone who plans, builds, and maintains a network. Offers a solid foundation in fiber optics. As the industry transitions from copper cabling to fiber optics, *Cabling: The Complete Guide to Copper and Fiber-Optic Networking, Fourth Edition* is a vital tool for network administrators and technicians. 

Book Information

Paperback: 1144 pages

Publisher: Sybex; 4 edition (July 20, 2009)

Language: English

ISBN-10: 0470477075

ISBN-13: 978-0470477076

Product Dimensions: 7.4 x 2 x 9.2 inches

Shipping Weight: 3.2 pounds

Average Customer Review: 4.6 out of 5 stars 11 customer reviews

Best Sellers Rank: #375,500 in Books (See Top 100 in Books) #8 in  Books > Engineering & Transportation > Engineering > Electrical & Electronics > Fiber Optics #62 in  Books > Computers & Technology > Hardware & DIY > Internet & Networking #1047 in  Books > Computers & Technology > Networking & Cloud Computing > Internet, Groupware, & Telecommunications

Customer Reviews

Use this in-depth guide to reinforce your preparation for the Fiber Optics Installer (FOI) or Fiber Optics Technician (FOT) certifications from the Electronics Technicians Association. The Complete Cabling Guide—Updated, Expanded, and Better Than Ever Did you know that nearly 70 percent of all network-related problems are due to poor cabling? If you're in charge of a network

infrastructure, you need this widely acclaimed resource on your shelf. Updated and greatly expanded, the new edition of this definitive guide is a complete, hands-on guide to both copper and fiber-optic networking, and it's packed with expert advice, best practices, and pages of the latest industry specifications and standards. Follow the golden rules of cabling, explore all the different types of cables, see why cutting corners is a bad idea, discover the obstacles to high-speed data transfer, and more, as you develop the skills you need to design and build a reliable, cost-effective cabling infrastructure. Topics include Introduction to data cabling Cabling specifications and standards Choosing the correct cabling Cable system components and infrastructure constraints Network equipment Fiber-optic, copper, and wireless media Design considerations for copper and fiber-optic systems Principles of fiber-optic transmission Passive components, multiplexers, and optical networks Testing equipment, link/cable testing, troubleshooting, and restoration You'll also find an overview of IEEE 1394 and USB networking, an appendix on home cabling, information on cabling resources, and more.

Andrew Oliviero is involved in the development of optical fiber cabling standards in TIA, IEC, ISO, and IEEE. He was involved in the development of the ANSI/TIA-568-C standard and has held the Chair position of TIA's Fiber Optic LAN Section in 2007. Andrew holds a B.S.E and Ph.D. in Chemical Engineering from the University of Pennsylvania and the University of Massachusetts. Bill Woodward has served three terms as chairman of the Electronics Technicians Association and is a principal electrical engineer based in Chesapeake, Virginia. Bill is also the committee chairman of the ETA fiber optic installer (FOI), fiber optic technician (FOT), and fiber optic designer (FOD) certification programs.

I am an RCDD and have been actively designing cabling systems for five years. Since I migrated to telecom from electrical engineering, my field telecom experience is light. I'm fine with the theory, but I'm not an installer. This book fills in the holes for me. The Clear descriptions of test equipment, good photos of fan out kits and other elements relating to field equipment have helped me to design better and more accurate rack layouts and telecom room layouts. I would agree that it's a beginner's book if you have a lot of field experience, but it is a valuable design tool if you don't.

Big book! Pretty indepth!

This is a choice I made after reviewing and shopping around over and over. I read the summary of

many books for a cabling beginner and this is the best I would recommend it to everyone. Simple to read and understand with real pictures.

Class book cost less than elsewhere. Well formed for extra study. Recommend to students it is new and cost savings.

Thick book with plenty of detail which is great so that you can dive deep into parts and still organized so that you can skip sections that are not of interest to you.

This book was a great book, it assisted me a lot in school I feel that it was a lot of help

There are many good information in this book. I can use as the reference for my design and installation work. Thanks So much to Andrew Oliviero,

Excellent book!!!!
