Optic Nerve Disorders (American Academy Of Ophthalmology Monograph Series)

Synopsis

Ophthalmologists need to be familiar with a wide variety of optic nerve diseases that may occur in isolation or form part of a generalized neurological or systemic disorder. *Optic Nerve Disorders* provides a succinct-yet-comprehensive review of the optic nerve disorders commonly encountered in clinical practice, briefly reviews the anatomy and physiology of the optic nerve, and outlines those techniques of particular importance during clinical testing of optic nerve function. It is a handy reference for the clinician to use in both the diagnosis of disorders and the management of care.

Book Information

Series: American Academy of Ophthalmology Monograph Series

Hardcover: 258 pages

Publisher: Oxford University Press; 2 edition (April 16, 2007)

Language: English

ISBN-10: 0195312813

ISBN-13: 978-0195312812

Product Dimensions: 10.1 x 0.8 x 7.2 inches

Shipping Weight: 1.8 pounds (View shipping rates and policies)

Customer Reviews

"There are few works targeted primarily to the clinician dealing with optic neuropathies. Drs. Kline and Foroozan have provided just such a resource: concise summaries of the most common optic nerve disorders, with authoritative, current, and practical recommendations for management. This monograph is beautifully illustrated, well organized, and clearly written. I recommend it highly to anyone, in training or beyond, seeking to acquire a basic understanding of optic nerve disease."
--Anthony C. Arnold, MD, Professor and Chief, Neuro-Ophthalmology Division, Jules Stein Eye Institute, University of California, Los Angeles

The diagnosis of optic nerve disorders relies less on the appearance of the optic disc than on the patient's history, clinical examination, and ancillary tests. Each case is a jigsaw puzzle: The more pieces one can put together, the faster the puzzle is solved. When I read the first edition, I thought it was absolutely the best book on the subject of optic nerve disorders I had ever read. There were pearls on every page! Dr. Kline now presents us with a

second edition, enhanced by new contributions from a number of young, but distinguished co-authors, as well as a co-editor. Together, they have taken the book to a new level, incorporating both clinical findings and the results of both new and old imaging and electrophysiologic testing. This new edition sparkles in its presentations, explanations, and superb illustrations. It is truly a masterpiece de resistance of which the authors should be exceedingly proud." --Neil R. Miller, MD, FACS, Wilmer Eye Institute, John Hopkins Hospital

Lanning B. Kline is Chairman and Professor at University of Alabama at Birmingham, Department of Ophthalmology where he has been a faculty member since 1979. He graduated from Duke University School of Medicine in 1973 and completed fellowships in neuro-ophthalmology at the Montreal Neurological Institute and at the Bascom Palmer Eye Institute, Miami, Florida. Dr. Kline is certified by the American Board of Ophthalmology, is a member of the North American Neuro-Ophthalmology Society, and a Fellow of the American College of Surgeons. Rod Foroozan is Director of Neuro-Ophthalmology at the Cullen Eye Institute at Baylor College of Medicine, Department of Ophthalmology. He graduated from Albert Einstein College of Medicine in 1997 and completed his fellowship in neuro-ophthalmology at Wills Eye Hospital.
