Pathology And Microbiology For Mortuary Science

Synopsis

Pathology and Microbiology for Mortuary Science is a comprehensive book for the study of pathology and microbiology written for mortuary science students, as a resource for educators, and as a reference for funeral directors and embalmers. The book is designed around the current American Board of Funeral Service Education's Curriculum Outlines for pathology and microbiology. Quick reference appendices provide a review of pertinent anatomy and physiology. Case studies in chapters that discuss specific diseases allow learners to review the postmortem condition of human remains in relation to the disease.

David F. Mullins, Ph.D. attended Purdue University, and holds a bachelor's degree from the Cincinnati College of Mortuary Science. He also attended Mississippi State University, where he obtained both a Masters of Science in Higher Education Administration and a Ph.D. in Sociology. Dr. Mullins began his career as a firefighter and EMT in aircraft crash rescue, where he also trained in hazardous materials management and mass fatality response. Dr. Mullins has sold cemetery property and served the community as a licensed funeral director and embalmer in both small and large funeral homes. In 1996, Dr. Mullins started teaching Funeral Service Technology. He helped write the Mississippi Model Curriculum in Funeral Service Technology, and he served on both an ICFSEB National Board Exam item writing team and an ABFSE Curriculum Subcommittee. In 2002, Dr. Mullins was honored by the Lt. Governor by being named faculty honoree for the Mississippi HEADWAE award. Dr. Mullins received the ABFSE Graduate Scholarship several times, and he was named Outstanding Doctoral student by the Alpha Kappa Delta international sociology honor society. Currently, Dr. Mullins is Vice President for Institutional Research, Advancement, Technology, and Accreditation at East Mississippi Community College.

This was the required textbook for 2 of my Funeral Service Education program courses; 1 quarter of Pathology (which is fascinating) and 1 Quarter of Microbiology (which is a bit harder). If you're really interested in either Pathology or Microbiology, like I am, then this book will serve you well to not only enhance your knowledge, but will also be used while you're taking either or both of these courses. I recommend keeping this book even when you finish your program of study. You never know when you'll need to refer back to it!!! Jeff Licensed Funeral Director and Embalmer

Excellent book and was able to save \$90 purchasing it here.

Exactly as described and super fast shipping

I bought this book with the goal to review current mortuary science information. Since I have graduated from a mortuary sciences program many years ago, I found this book was an overall worthwhile review with a few updates for me. It is basic enough and covers relevant material and I can see why it would be used as a text for entry level mortuary science students. My two reservations are: 1. The text is only a basic survey level book. (Having recently taken a 5 unit college course in Microbiology, I quickly realized it is not even close to breadth or depth in comparison to texts for college level Microbiology.) Therefore, I concluded this text can't be used as a significant or a complete resource, to aid those already in the field, or those who may need more knowledge. 2. The book is lacking in the aspect of bridging the material to direct application for funeral home employees and embalmers; the few random mentions of such could be greatly improved and would make the book far more useful to all level of readers. What few "connections" that were there, I did find helpful, but I found wanting far more that this book offered.

This book is easy to read and has short chapters that are straight forward and get to the point. I actually don't mind reading it for my pathology class!

I am keeping this book as an additional reference for the future.

great book.
