The Topology Of CW Complexes

Synopsis

Most texts on algebraic topology emphasize homological algebra, with topological considerations limited to a few propositions about the geometry of simplicial complexes. There is much to be gained however, by using the more sophisticated concept of cell (CW) complex. Even for simple computations, this concept ordinarily allows us to bypass much tedious algebra and often gives geometric insight into the homology and homotopy theory of a space. For example, the easiest way to calculate and interpret the homology of $C\mathbb{P}^n$, complex projective n -space, is by means of a cellular decomposition with only $n+1$ cells. Also, by a suitable construction we can "realize" the singular complex of a space as a CW complex and perhaps thus give a more geometric basis for some arguments involving singular homology theory for general spaces and a more concrete basis for singular homotopy type. As a final example, if we start with the category of simplicial complexes and maps, common topological constructions such as the formation of product spaces, identification spaces, and adjunction spaces lead us often into the category of CW complexes. These topics, among others, are usually not treated thoroughly in a standard text, and the interested student must find them scattered through the literature. This book is a study of CW complexes. It is intended to supplement and be used concurrently with a standard text on algebraic topology. --This text refers to the Paperback edition.

Book Information

Hardcover: 216 pages

Publisher: Van Nostrand; 1 edition (January 1, 1969)

Language: English

ISBN-10: 0387901280

ISBN-13: 978-0387901282

Package Dimensions: 9.6 x 6.6 x 0.8 inches

Shipping Weight: 1.5 pounds

Average Customer Review: Be the first to review this item

Best Sellers Rank: #691,728 in Books (See Top 100 in Books) #151 in Books > Science & Math > Mathematics > Geometry & Topology > Topology #7896 in Books > Textbooks > Science & Mathematics > Mathematics
