Anna Curren has been writing inspired clinical textbooks for more than 40 years. A nurse and former Associate Professor at California's Long Beach City College, she first wrote this text when the one she was using bore no resemblance to her students' clinical needs. Her graduate degree in instructional design, along with many student and instructor reviews, helped her create what is now the most adopted text on the subject. Also a successful entrepreneur, Ms. Curren founded Wallcur, Inc., a company which produces instructional products, including Injecta-Pad, Practi-Amp, Practi-Insulin Training Pack, and other learning resources. Ms. Curren also wrote the best-selling Dimensional Analysis For Meds, also by Cengage Learning.

Throw away all your other books, this is the only that made math for meds easy. My wife is a RN and had this when she was in nursing school, she loaned it to a friend and never got it back. She wanted a review and she looked all over and found it luckily online. Don't waste your time with others....this book is the one you want especially if you HATE math.

I found this book to be incredibly easy to understand and I love the step by step explanations. I'm taking my first pharmacology class right now and was very rusty on my basic math skills and have never worked with calculations for meds. This book, thus far, (I'm still using it) has helping me understand class material much better. I recommend this book for anyone who is getting into the medical field and having to deal with math and dosages. It is a great learning tool.

Veru good book for nursing students

very good if you don't need to use dimensional analysis methods to solve problem.

Thanks

ok

Same as 11th edition but for a fraction of the period.

Ordered this book for next quarter, the book came in great condition except for writing on first page and a missing CD-Rom disk. It was only \$3.00 less buying on line then in my school book store, every penny counts but every aid in learning does too. When I called to return I asked as to how I could be sure that I would receive a complete product when it is advertised as "NEW" as opposed to "USED" and was informed that there isn't a way to be sure until you receive the item at home and look for yourself.
