Customer Reviews

These are ok, but not as good as I expected. The drawings and photos on the cards come out of Dissection of The Dog (Evans/Delahunta), Miller's Anatomy of the Dog, and Textbook of Veterinary Anatomy (Dyce). Each card has several anatomical features numbered, with the answers on the back. The cards are full-color, and the printing is good. 80% or so are based on canine anatomy; the other 20% are horse, bird, cat, pig, cow. Where I feel these flashcards fall short: 1) Because there are

several items labelled on each card, once you look at the back, you see the rest of the answers. I expected only one item per card so I could use them as true flashcards. The way these are setup, they are no better than using the pages out of the textbook to quiz yourself.2) The durability of the cards is poor. They are on lighter stock than I would have expected, and they are not coated. As a result, the corners bend very easily.3) The box they come in is slightly too small to hold all of them. As a result, the box corner seams were split on arrival. The undersized box also makes it a very tight fit to get the cards in and out easily.Overall:These could have been a good tool, but it doesn't seem like much thought went in to putting them together. If you already have Dissection of the Dog or Anatomy of the Dog, I wouldn't recommend getting these cards.

These flash cards really helped me memorize the anatomy of common animal species such as the cat, dog, horse, and pig. I especially needed help on the farm animals as I am not going into large animal practice so I needed more help to prepare for the large animal tests. Highly recommend.

I am a first year veterinary student and I will admit that anatomy is not one of my strong suits. Especially since this is my first time learning all new species! I love these cards. I am a visual learner so reading about anatomy doesn't really help me much, I need to be able to see it. I have tried reading Duke's but that hasn't really helped me very much. I bought these and have been using them as my primary source to study anatomy. The box comes with all different species (equine, dog, cat, pig, cow) no birds though. The cards are also organized into body area like thorax, pelvic limb, and so on. The cards also make them easier to take on the go, you can just take the section and species that you are focusing on put them in your bag and pull them out when you have a few extra minutes between classes.

good help for my daughters school

I purchased this item for someone who is unable to have books. Long story.I chose this item for the person because they had so much information on them in such a small space. Pictures, diagrams, descriptions, definitions.A lot of education in one little box. Well worth the money and the recipient is over the moon, delighted with the gift of these flashcards.A+++++ will definitely be looking for more items like this in the future.

These flash cards were absolutely fabulous, they just were not helpful in my particular course of

school work. They are of great quality, easy to read, and divided into specific categories which is extremely helpful. The cards got into specifics that were not required in the anatomy course I took, and did not cover a lot of the more general items that I was required to learn. If you are taking an anatomy course that requires you to learn very specific muscles/nerves/etc then these will be a great help to you!

This product was less than what I thought it would be for the course I am using it for. I am a 1st year Vet student and thought these cards would be very helpful. But they do not include attachments (which are a huge part of our tests and learning) and they are basically just the pics from the book on a smaller card. that's all. the organization of the cards is also confusing if your class does not go by specific regions. i.e the muscles-there's no set for the muscles, they are all spread throughout the different sections

Love these cards! Not only do they have cartoon looking pictures, they actually have some real pictures of x-Rays and body parts. Must have for any one looking into being a vet or vet tech!
