Biotechnology, Second Edition

Synopsis

Biotechnology, Second Edition approaches modern biotechnology from a molecular basis, which has grown out of increasing biochemical understanding of genetics and physiology. Using straightforward, less-technical jargon, Clark and Pazdernik introduce each chapter with basic concepts that develop into more specific and detailed applications. This up-to-date text covers a wide realm of topics including forensics, bioethics, and nanobiotechnology using colorful illustrations and concise applications. In addition, the book integrates recent, relevant primary research articles for each chapter, which are presented on an accompanying website. The articles demonstrate key concepts or applications of the concepts presented in the chapter, which allows the reader to see how the foundational knowledge in this textbook bridges into primary research. This book helps readers understand what molecular biotechnology actually is as a scientific discipline, how research in this area is conducted, and how this technology may impact the future. Up-to-date text focuses on modern biotechnology with a molecular foundation. Includes clear, color illustrations of key topics and concepts. Features clearly written without overly technical jargon or complicated examples. Provides a comprehensive supplements package with an easy-to-use study guide, full primary research articles that demonstrate how research is conducted, and instructor-only resources.

Book Information

Hardcover: 850 pages

Publisher: Academic Cell; 2 edition (July 9, 2015)

Language: English

ISBN-10: 0123850150

ISBN-13: 978-0123850157

Product Dimensions: 8.4 x 1.7 x 10.9 inches

Shipping Weight: 5.7 pounds (View shipping rates and policies)

Average Customer Review: 5.0 out of 5 stars 1 customer review

Best Sellers Rank: #119,716 in Books (See Top 100 in Books) #64 in [Books > Medical Books > Basic Sciences > Cell Biology](#) #76 in [Books > Engineering & Transportation > Engineering > Bioengineering > Biotechnology](#) #121 in [Books > Science & Math > Biological Sciences > Biology > Molecular Biology](#)

Customer Reviews

David P. Clark did his graduate work on bacterial antibiotic resistance to earn his Ph.D. from Bristol University, in the West of England. During this time, he visited the British Government's biological

warfare facility at Porton Down and was privileged to walk inside the (disused) Black Death fermenter. He later crossed the Atlantic to work as a postdoctoral researcher at Yale University and then the University of Illinois. David Clark recently retired from teaching Molecular Biology and Bacterial Physiology at Southern Illinois University which he joined in 1981. His research into the Regulation of Alcohol Fermentation in *E. coli* was funded by the U.S. Department of Energy, from 1982 till 2007. From 1984-1991 he was also involved in a project to use genetically altered bacteria to remove contaminating sulfur from coal, jointly funded by the US Department of Energy and the Illinois Coal Development Board. In 1991 he received a Royal Society Guest Research Fellowship to work at Sheffield University, England while on sabbatical leave. He has supervised 11 master's and 7 PhD students and published approximately 70 articles in scientific journals. He has written or co-authored several textbooks, starting with *Molecular Biology Made Simple and Fun* (with Lonnie Russell; (Cache River Press, First edition, 1997) which is now in its fourth edition. Other books are *Molecular Biology and Biotechnology* (both published by Elsevier) He recently wrote a popular science book, *Germs, Genes, & Civilization: How Epidemics Shaped Who We Are Today* (2010, Financial Times Press/Pearson). David is unmarried, but his life is supervised by two cats, Little George and Mr Ralph. Nanette J. Pazdernik, Ph.D. is a co-author of *Biotechnology*, 2nd edition and *Molecular Biology*, 2nd edition, with Dr. David Clark. The second edition of *Molecular Biology* won a Texty award from the Textbook and Academic Authors Association in 2013. She has also authored an on-line study guide to accompany the update edition of *Molecular Biology*. She has taught courses in General Biology, Genetics, as well as Anatomy and Physiology at Southwestern Illinois College, McKendree University, and Harris-Stowe University. She received her BA in Biology from Lawrence University in Appleton, Wisconsin, in 1990 and her PhD in Molecular, Cellular, Developmental Biology and Genetics from the University of Minnesota in 1996. Her doctoral thesis studied how alterations in the structure of lactose permease affect its ability to transport sugar across the membrane of *E. coli*. Following her degrees, she investigated the IL-1 and TNF signal transduction pathways that control apoptosis and immunity at Indiana University School of Medicine. She has most recently studied the various molecules that maintain the stem cell fate in *C. elegans* at Washington University School of Medicine in St. Louis, MO. She is married and the mother of three children, ages 15, 12, and 8, which always make her realize the role biology plays in personality and development!

Great book. A little technical but I enjoyed it. Not keeping any domestic workers employed since it is printed in china. The print quality is excellent.
