# Applications Of Social Research Methods To Questions In Information And Library Science

## Synopsis

For many practitioners, best practices are often developed through significant amounts of direct experience. However, they can also be developed through the examination and application of research findings. By critically assessing existing studies within library and information science, both aspiring and experienced professionals can acquire a deeper understanding of available methods, as well as design more effective studies. In what is surely the first of its kind for librarians, Barbara Wildemuth has created a book that mirrors the process of conducting a research study; at the same time, she exposes the reader to a wealth of competing and complementary techniques. Each chapter introduces a particular research method, points out its relative strengths and weaknesses, and provides a critique of two or more exemplary studies. An invaluable guide for librarians, educators and students alike. Section One considers those research questions most often asked in the field of information and library science, and explains how they can arise from practice and direct observation or from existing theories. Section Two covers a variety of research designs, as well as the sampling issues associated with those designs: case studies, naturalistic research, longitudinal studies, Delphi studies, and quasi-experimental and experimental designs. Section Three moves on to methods for collecting data: surveys, various types of interviews, historical and documentary studies, transaction log analysis, diaries, and participant observation. It concludes with a chapter discussing the ways in which any of these methods might be combined for use in a particular study.

## Book Information

Paperback: 421 pages

Publisher: Libraries Unlimited (May 19, 2009)

Language: English

ISBN-10: 1591585031

ISBN-13: 978-1591585039

Product Dimensions: 7 x 1 x 10 inches

Shipping Weight: 2 pounds (View shipping rates and policies)

Average Customer Review: 4.1 out of 5 stars 10 customer reviews

Best Sellers Rank: #325,645 in Books (See Top 100 in Books) #126 in [Books > Textbooks > Humanities > Library & Information Science](#) #257 in [Books > Politics & Social Sciences > Social Sciences > Library & Information Science > General](#) #689 in [Books > Reference > Words, Language & Grammar > Study & Teaching](#)

## Customer Reviews

"Aimed at social scientists and library science professionals, this guide to research methodologies evaluates the strengths and weaknesses of each type of research design. Wildemuth (information and library science, U. of North Carolina at Chapel Hill) reviews the most common research questions asked in the fields of library and information sciences and analyzes sampling issues from case studies, naturalistic research, longitudinal studies, Delphi studies and experimental designs. Data collection methods are also reviewed, including surveys, interviews, historical studies, transaction log analysis and participant observation." - Reference & Research Book News

"This is a valuable addition to any professional or library science collection where a need exists for a basic yet thorough introduction to the area of research methods and methodology." - ARBA

"In this earnest, encyclopedic, energetic and easily accessible book, Barbara Wildemuth has produced a landmark text that will be of great use to information and library science master and doctoral students, as well as to professors and professionals in library and allied fields. . . . This book will easily achieve its stated goal of aiding its readers in designing and publishing research projects that will eventually improve professional practice." - College & Research Libraries

"Fills an important gap, connecting the dots between social science research methods and real-world applications in Library and Information Science research. It is very strongly recommended for use in graduate school Library and Information Science courses that teach research methods from the context of social science. This text serves as an excellent reference for any librarian who conducts research, for example, academic librarians who are faculty members." - Catholic Library World

BARBARA M. WILDEMUTH is a professor in the School of Information and Library Science, University of North Carolina at Chapel Hill. Prior to her 15+ year career at UNC, she was the associate director of the ERIC Clearinghouse on Tests, Measurement, and Evaluation.

The language in this book is unnecessarily complex, making it difficult to read. The font is a little small as well, also making it difficult to read. The examples included within the chapters to illustrate the concepts are very useful, thankfully. I'm glad I bought it (instead of renting) so I can highlight the heck out of it.

What I like about this textbook is the conversational tone. Not only is it detailed and clear, but it's easy to read. I find it helpful and, for a textbook, readable. Some people might find it a little annoying when the text goes very into detail about certain things and may wish that it were a little more concise. However, too much clarity is better than too little, and this is only one small aspect of the

textbook. Overall, it is great.

It is helpful and useful for the researchers and postgraduate students. Giving many real examples for the methods in particular Information studies or science field as well as, it is so useful for other people who are in the different majors. I highly recommend to get this book.

Very helpful book! Easy to read and excellently written. Every researcher should have a copy of this book in their library.

Great product! Worked better than described! Would buy again!

Item came as described and fast. Just in time for class.

Thank you

Do not use this book unless you are already an expert in social research! It is filled with jargon to the extent that it is incredibly difficult to understand the point that the author is trying to make. There are much better texts on research from a library perspective.
